Bristol City Council

City Hall (formerly The Council House)
College Green
Bristol BS1 5TR
Website: www.bristol.gov.uk
www.bristolisopen.com Contact:
Ms Nicola Yates, Head of Bristol City Council

City Council

Bristol is one of the leading smart cities in the UK and Nicola Yates will be presenting the **Bristol Is Open** project, a joint venture between the University of Bristol and Bristol City Council. Bristol Is Open is funded by the local, national and European governments, with academic research funding, and by the private sector. It is delivering research and development initiatives that contribute to the development of a smart city and the 'Internet of Things'.

Small sensors, including the smart phones and GPS devices of willing participants will supply the three new fast networks in the centre of Bristol, with information about many aspects of city life, including energy, air quality and traffic flows. A city operating system will dynamically host this machine-to-machine communication, allowing the development of a wide range of applications.

Once the new networks are established in the city centre, they will be extended out to the wider city region, to Bath, parts of North Somerset and South Gloucestershire, over the next three years. These networks are for research and development projects, they will *not* provide free or commercial broadband or Wi-Fi, however, there will be opportunities for people to join one of the experimental projects if they want to.

All the data generated will be anonymised and made public through an ['open data' portal](#).

Chipside Limited

Unit 7 Callow Park
Callow Hill
Brinkworth Wiltshire SN15 5FD
Website: www.chipside.com
www.mipermit.com
Contacts: Mr Paul Moorby,
Managing Director
Mr David Wright

ICT

Chipside's Oppidatim Smart City network provides over 120 UK smart towns, cities and regions with parking and traffic management systems. Chipside works with UK Local and County Councils to revolutionise their delivery of traffic and parking management services. Providing managed ICT technologies to deliver the Central Government e-government agenda and shared service cost/efficiency savings, Chipside Local Authority customers last month received national outstanding achievement awards for working together. From removing paper, increasing public access to services, reducing costs from use of innovative handheld systems for on street traffic management to providing the very latest virtual parking permit services, Chipside has established its reputation for innovative thinking and has arguably changed the industry for the better. www.parkingpartnership.org is Essex County example.

Oppidatim gets information – big, open data – to all interested parties in real time. Information that shapes local policies, drives local economies, empowers local communities.

The Oppidatim smart network includes mobile computers provided to law officers on street, penalty notice processing systems, resident permits, tourist permits, business permits, ANPR, CCTV and virtual payment applications.

Working with British global brands like Psion PLC, solid reputation 'as part of the team' with UK Local Authorities, Chipside grew from a £10 start-up company (two employees) working from home to 2011 £1M+ turnover company, 16 staff, servicing 25% of Local Authority parking management market. Services (www.mipermit.com) lead the way managing crowded residential road space and efficiently link with many other resident focused Local Authority systems. Mipermit has global appeal. Chipside recently turned down an international takeover offer.

	iMODULUS provides a simple, modular alternative to conventional and ISO containerized solutions. Based on a scalable specification offering true flexibility to those businesses that need a solution to be delivered quickly, but that also anticipate the need to allow for future growth in terms of both power load and technical space. The mechanical and electrical systems installed in the iMODULUS solution are designed to be modular in arrangement so that they can be scaled up or down, without affecting the resilience whilst simultaneously providing flexibility. With green credentials, the harmonized power and cooling in the systems can also lead to lower capital and operational costs reducing expenditure by a minimum of 20%.
Imperial College London South Kensington Campus London SW7 2AZ Website: www.imperial.ac.uk Contact: Ms Rosemary De Vos	University Imperial College London is a science-based university with an international reputation for excellence in teaching and research focusing on the four main disciplines of science, engineering, medicine and business and is renowned for its application of these skills to industry and enterprise. Imperial is rated amongst the world's best universities and is committed to developing the next generation of researchers, scientists and academics through collaboration across disciplines. Located in the heart of London, Imperial is a multidisciplinary space for education, research, translation and commercialisation, harnessing science and innovation to tackle global challenges.
